The new seed is a good ice-cream, the fruit of both, and the farmer's labor. This time, in the field of seed breeding, the world experience is necessary to learn.

At the same time, Nath Bio-Genes is exploring organizational issues on how to create a joint venture specializing in elite cotton production, parenting, manufacturing and exporting, using advanced technology, said the Minister of Innovation. - Uzbek-Indian Seed Plant is based on Mirzayev Shuxrat Kenjayevich's Farmer's Farm, which produces direct and direct investments in Indian technology, and produces high-quality cotton and maize

At the event, the guests invited the representative of the Ministry of Innovation Development of Mumbai, the center for financial, trade and economic development of India, to attract foreign investors to our country. In addition, advanced technologies and innovations in rural farming in Andizhan have underscored that Indian participation in regional exhibitions will enable them to study the climate and conditions of the region.

During the visit, flights to Uzbekistan will continue to be carried out by various agencies specializing in seed, quarantine and agriculture.
